SUMMARY

Full-stack engineer who owns what gets built, not just the code behind it. Running a high-traffic insurance and loan-origination portal processing 300+ applications daily and partner platforms supporting 1,500+ field agents — built in React, Next.js, Node.js, and Python. Took Lighthouse 50→84 in production — then independently architected and shipped four AI-integrated SaaS products, end-to-end.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python
AI Engineering: MCP (Model Context Protocol), RAG, tool calling, multi-agent orchestration, OpenAI API, Google Gemini (API key management, Vertex AI)
Cloud & Infrastructure: AWS (EC2, S3, RDS, IAM, Lambda, CloudWatch), GCP (Compute Engine, Cloud Storage, IAM & Service Accounts, OAuth, Vertex AI), Firebase (Auth, Firestore), Microsoft Azure (Azure DevOps, CI/CD)
Full-Stack: React, Next.js, React Router, Node.js, Express, FastAPI, HTML5, CSS3, Tailwind CSS
Data & APIs: PostgreSQL (pgvector), MongoDB, Redis, Prisma, Zod, REST APIs, WebSockets, JWT, OAuth
Practices & Testing: Agile/Scrum, Microservices, CI/CD, Playwright, Vitest
Tools: Docker, Git, GitHub Actions, Claude Code, Cursor, Codex

EXPERIENCE

Livlong 365 — Jul 2023 – Present

Software Developer — Mumbai, Maharashtra, India

- Own GTL (Gold Term Loan), the company's primary insurance and gold-loan portal, end-to-end — processing 300+ applications daily with full production support and field-agent debugging.
- Led the Insurance Partner Portal and POS Agent App, scaling to 1,500+ field agents selling policies, wellness packages, and gold loans.
- Built an AI chatbot that replaced agents' manual, multi-tab policy entry with a conversational flow — agents describe a case and the bot completes the punch-in itself.
- Revamped livlong.com from Svelte to Next.js, lifting Lighthouse 50→84 and cutting LCP by 45%.
- Developed the wellness order-management backend, provider-onboarding portal, and telecaller purchase workflows; built a shared component registry and mentored a junior engineer.

PROJECTS

KnownIn — Professional Identity & Resume Workspace — Sep 2026

knownin.com

- Built a full-stack identity platform (Next.js, Node.js, PostgreSQL, MCP) that lets AI assistants — Claude, ChatGPT, Cursor — read and update one profile directly, replacing manual edits across separate résumés and job trackers; deployed on AWS (EC2, S3) with Firebase authentication and GCP IAM-managed service accounts.

Cubicle — Self-Hosted Multi-Agent AI Office — Aug 2026

github.com/SAURABHRJADHAVCSE/cubicle

- Built a multi-agent system (RAG, OpenAI/Gemini APIs) where agents handle coding, research, and content tasks end-to-end — cutting manual tool-switching across 12+ connected engines; ran agent workloads on AWS EC2 with Gemini API keys secured via GCP IAM roles.

Claratto — AI-Powered Adaptive Learning Platform — Feb 2026

claratto.com

- Built an AI tutor (Node.js, PostgreSQL knowledge graph) that tests comprehension through active recall instead of passive review, showing learners exactly which concepts need more practice; hosted on AWS (RDS, S3) with Google OAuth sign-in.

EDUCATION

University of Mumbai — 2019 – 2023

Bachelor of Technology, Computer Engineering
